

Managed IT

Left unmonitored, your network and computers will inevitably fail, leaving employees idle and impacting your ability to do business. This can cost thousands through the loss of productivity, revenue, and image. Using proactive monitoring, maintenance and support, we take corrective action before a problem occurs, greatly reducing downtime.

Your business depends on your network's availability, performance, and security—and your data is business-critical.

Common frustrations:

- * E-mail / Work Order delivery systems down
- * Client database unavailable
- * Spyware, viruses and unauthorized access issues
- * Banned software (games and file-sharing) monopolizing resources
- * Predictable hardware failures
- * Data loss due to hardware or user error

Managed IT Service from Alltek Support provides an affordable solution to these problems... and many more.

What are "Managed IT Services"?

Managed IT Service means that we are continuously monitoring the health, performance and assets of your infrastructure and managing growth by providing:

- * **Scheduled site / device reporting**—a bird's eye view into the real performance of your IT infrastructure
- * **Perspective on installed hardware and software providing greater use of existing assets**
- * **The ability to forecast failures before they occur, such as an impending hard drive crash**
- * **The ability to solve most problems remotely, saving time and money versus onsite visit**
- * **Service Features**
- * **Service Levels**
- * **Free Assessment**
